I am going to have an EEG today at Connecticut Children's Medical Center. I am having an EEG to check my brain.

First we will go to the check in window. My mom will tell the receptionist that I am ready for my EEG

We will wait in the waiting room.
I can watch TV or play with some
toys while I am waiting. I will only
wait for a few minutes

The tech will call me in for my EEG.
The tech will bring me to the room
where I will have my EEG.

My tech will tell me and show me what will happen during the EEG. I will listen and watch. I can hold my toy and my blanket. My mom will also stay in the room with me.

I will lie down on the bed. My tech may move the bed when we are ready to get started. This is okay.

I will try to keep my hands on my own body during the EEG. This is important. My tech and mom will be happy if I follow directions.

My tech will put a tape measure on my head. Then my tech will make little marks on my head with a crayon. This is okay. The marks will wash right off when we are all done. I like it when she makes a happy face on her finger. If I want her to, she can make one on my finger too.

Next, my tech will put a little bit of gel on each mark. It may feel cold and wet, but it won't hurt. She will put a button on each spot of gel. There are 26 buttons in all. The buttons won't hurt. I can watch a movie, hold my stuffed animal, or talk to my mom while she does this. I just need to remember to lie still.

My tech will wrap gauze around my head to keep the buttons from moving. This is okay, I just need to lie still.

Next my tech will lower the bed and turn off the lights and movie. My mom or dad will still be with me. I may hear my tech typing on the computer.

My tech may ask me to breathe fast or
blow a pinwheel for a few minutes.
I might feel dizzy. That's okay.
It will go away.

My tech will tell me when to breathe
fast and when it's time to stop
breathing fast. My tech and my mom
will be happy if I do a good job.

Next, my tech may show me a flashing light. The light may be bright to look at. I will try to lie still. I can hold my blanket and my favorite toy.

I will try to fall asleep when my tech asks me to. This is very important. My tech or my mom will wake me up in a few minutes.

When I wake up, I will lie still for a few minutes. Then my tech will take off the buttons. My tech will wash off the marks and the gel with a warm cloth. Ahh...that feels nice.

The EEG is all done. My tech might say "Good job!" or give me a prize. It is time to go. Having an EEG is not so hard. I know just what to do
